Refrigerant Leak Detector Model D400 is Certified to Meet SAE J2791

Hialeah, Florida, Techno Tools Corporation, a manufacture of hand held electronic diagnostic and test instrumentation has announced that its new lower in cost heated sensor refrigerant leak detector model D400, was certified by an independent testing laboratory to comply with SAE International Standard J2791. The new SAE Standard was published in response to a need to reduce refrigerant HFC-134a emissions and to establish minimum performance criteria for an improved class of electronic hand held probe-type refrigerant leak detectors capable of finding very small to moderate leaks. The D400 is the lowest cost instrument to comply with the enhanced performance requirements of the SAE Standard.

For information concerning the model D440A or SAE J2791, contact Techno Tools Corporation, Customer Service Department, 2651 West 81st Street, Hialeah, Florida 33016, www.techno-tools.com, or call 800.222.0956.
